

# Rhino Visual Tips 4.0

## Curve Tools

Learn how to edit and manipulate your curves.

Learn how to how to edit all your curves in Rhino 4.0. There are many editing tools that would help you manipulate your model. Mostly all of them work in both 2D and 3D.

### Key things to remember.

There are many options for editing curves in Rhino 4.0. You should pay attention to those options since a good 2D drawing may have few spots where you need to fix or edit them. Try few of them and find out by yourself how powerful these tools are. Try for example the new Blend (**BlendCrv**) or Curve from Two Views (**Crv2View**).

**Notes:** There are many editing tools that would make your drawing more precise. Every time you import a drawing from another program, you may have to edit a few things here and there. Get familiar with all the tools. You will learn soon you cannot work without them
