

Rhino Visual Tips 4.0

Document properties.

Learn how to modify Rhino options and document properties.

After you create objects, you will learn how you can change the display mode of each one. You can view them as wireframe, shaded or ghosted.

Key things to remember.

Keep in mind that all the changes you make to Document Properties will be saved inside the 3DM file, but all the changes that you make to Rhino Options, like Color, Keyboard, Mouse, General, Files, View, etc affect only your computer. You can export all your Rhino Options to a file so that you can import them to another computer easily.

Notes: It is very fun to use the stereo glasses after you learn how to create a display mode using the Rhino options. The glasses that Rhino Visual Tips 4.0 comes with have the Red glass to the left, and the Blue glass to the right. There are three 3DM files that you can open and see for yourself with your stereo glasses.
